# I-CaM Project - Implementing a Case-Management Intervention for Emergency Department Frequent Users: a muticenter study in Switzerland (PNR 74)

P Bodenmann<sup>a</sup>, V Grazioli<sup>a</sup>, M Canepa- Allen<sup>a</sup>, O Hugli<sup>b</sup>, JB Daeppen<sup>c</sup>, J Griffin<sup>d</sup>, J Moullin<sup>e</sup>, D Zullmann<sup>f</sup>

a. Vulnerable Populations Center, Department of Ambulatory Care and Community Medicine, Lausanne, Switzerland; b. Emergency Service, Lausanne University Hospital, Lausanne, Switzerland; c. Alcoholism Service, Lausanne University Hospital, Lausanne, Switzerland; d. Cornell University, USA; e. San Diego University, USA; f. Stanford University, USA

#### **BACKGROUND**

## What do we know about Emergency Department (ED) Frequent Users:

## a) in the international setting?

- 2-12 visits to the ED / year
- > 5 visits / year <sup>1</sup>
- 4%-8% patients → 21-28% consultations<sup>2</sup>
- vulnerable populations<sup>2</sup>

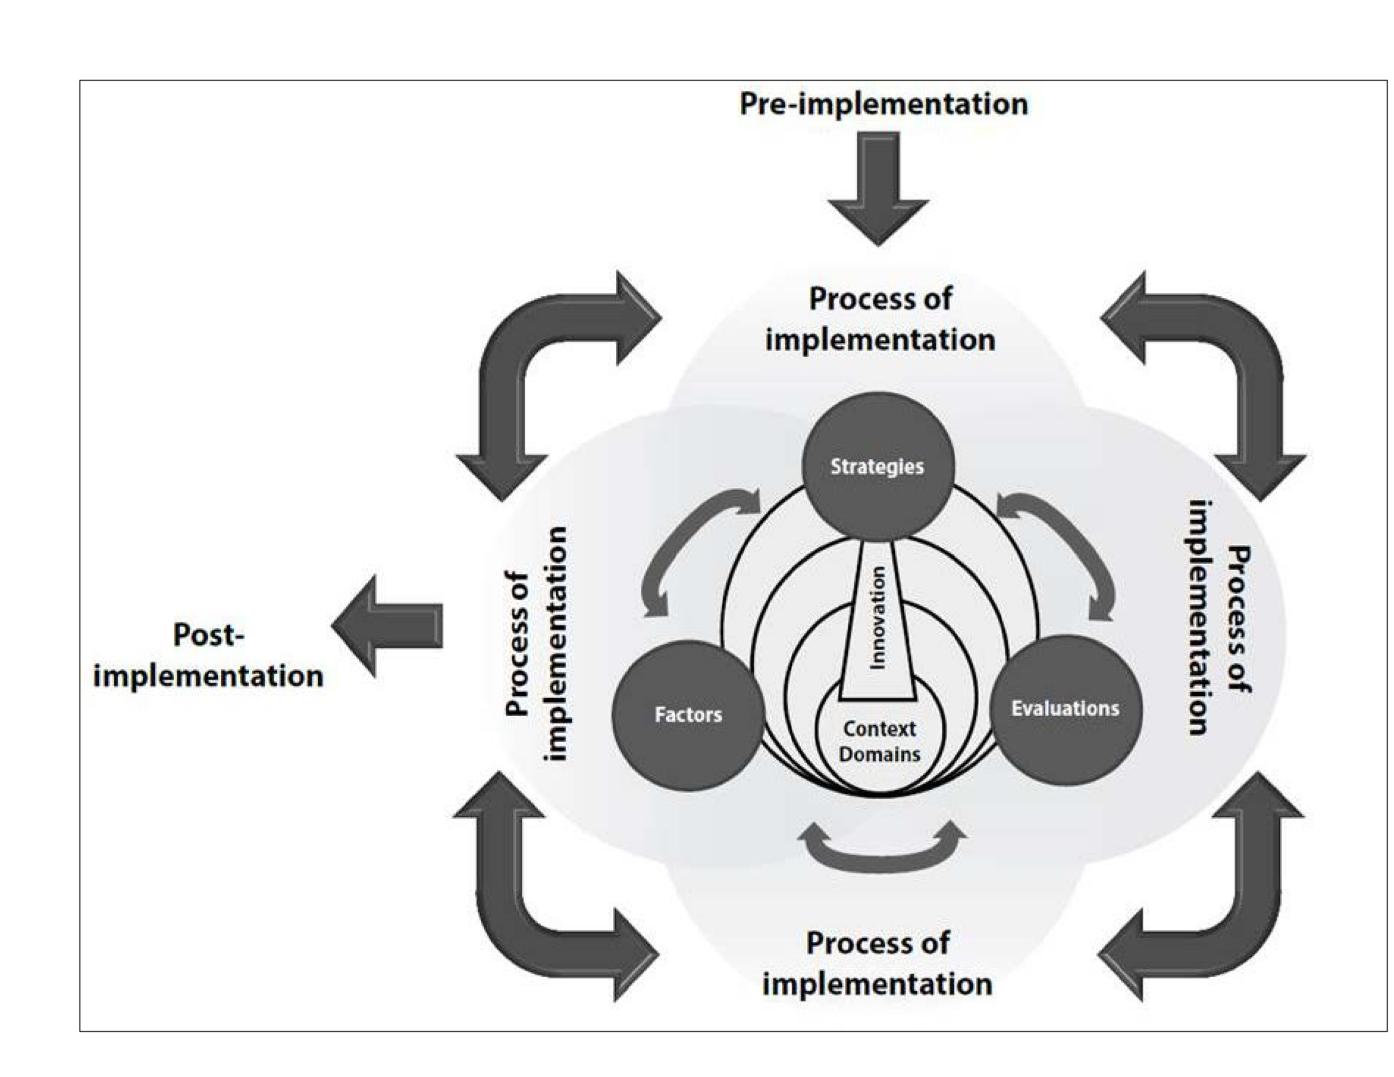

## b) in the local setting?

- 4% patients, 12% visits,<sup>4</sup>
- social and medical vulnerability<sup>5</sup>
- stereotypes<sup>6</sup>
- mental health and dependencies<sup>7</sup>
- mortality<sup>8</sup>
- case-management<sup>9-12</sup>

#### **RESEARCH OBJECTIVES**

- to develop and disseminate a practical Case Management (CM) Intervention for ED Frequent Users to several hospitals in the French-speaking region of Switzerland
- to study the process of implementation of the CM Intervention
- to study the impact of a CM Intervention on health services outcomes (ED use, health care reorientation, quality of life and costs)

## **METHODS**

Generic Implementation Framework (GIF)

From Joanna C Moullin et al. Health Research and policy systems, 2015

Intervention	Group 1: low intensity	Group 2: moderate intensity	Group 3: high intensity	Phase of delivery
CM Toolkit	X	X	X	Preparation
CCC and MI Training	X	X	X	Preparation
Team member selection support		X	X	Preparation
Non-intensive coaching		X		Operation
Intensive coaching			X	Operation

Analytical plan	Implementation outcomes	Health service outcomes	Research tools	Methodology
1. Development	• none	• none	NA	NA
2. Exploration	<ul><li>level of awareness</li><li>level of adoption</li></ul>	NA	<ul><li>stages of implementation</li><li>completion scale</li></ul>	<ul><li>descriptive statistics</li></ul>
3. Preparation phase	<ul><li>facilitators &amp; barriers</li></ul>	NA	• survey	<ul><li>qualitative –</li><li>questionnaire</li></ul>
4. Operation (implementation)	<ul> <li>facilitators &amp;</li> <li>barriers</li> <li>fidelity of</li> <li>implementation</li> <li>reach of</li> <li>implementation</li> </ul>	<ul> <li>ED utillization</li> <li>health care reorientation</li> <li>quality of life</li> <li>cost</li> </ul>	<ul> <li>survey</li> <li>fidelity of CM</li> <li>checklist</li> <li>data collection</li> <li>forms</li> </ul>	
5. Sustainability (continuation)	<ul><li>reach of implementation</li></ul>	• Similar as above	<ul><li>data collection forms</li><li>NoMAD</li></ul>	• qualitative - focus groups

NA: not applicable

### **EXPECTED RESULTS**

- ✓ to develop and disseminate a practical CM Intervention for ED Frequent Users to several hospitals in the French-speaking region of Switzerland
- ✓ to study the process of implementation of the CM Intervention
- ✓ to study the impact of a CM Intervention on health services outcomes (ED use, health care reorientation, quality of life and costs)
